The application has been amended as follows:

Claim 1:

A method for configuring Transmission Control Protocol/Internet Protocol (TCP/IP) settings, the method comprising the steps of:

- providing a mainframe computer having only a non-graphical user interface for manually manipulating TCP/IP configuration flat files;
- providing a graphical user interface for configuring the TCP/IP settings, the graphical user interface including at least one control, wherein said graphical user interface is configured for at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of the mainframe computer;
- integrating the graphical user interface into the non-graphical user interface, wherein said graphical user interface is integrated with an interface component of [[an operating system]]

the at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of said mainframe computer;

accessing data contained within at least one configuration flat file containing the TCP/IP settings for said computer;

displaying the TCP/IP settings based upon said accessed data within said graphical user interface;

altering one or more of said displayed TCP/IP settings using said at least one control in the graphical user interface; and

updating the at least one configuration flat file according to the altered TCP/IP settings.

Claim 28:

A [[computer-readable storage]] computer device having a display and having stored thereon, a computer program having a plurality of code sections, said code sections executable by a computer for causing the computer to perform a method for configuring Transmission Control Protocol/Internet Protocol (TCP/IP) settings, the method comprising the steps of:

providing a mainframe computer having only a non-graphical user interface for manually manipulating TCP/IP configuration flat files;

providing a graphical user interface for configuring the TCP/IP settings, the graphical user interface including at least one control, wherein said graphical user interface is configured for at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of the mainframe computer;

integrating the graphical user interface into the non-graphical user interface, wherein said graphical user interface is integrated with an interface component of [[an operating system]]

the at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of said mainframe computer;

accessing data contained within at least one configuration flat file containing the TCP/IP settings for said computer;

displaying the TCP/IP settings based upon said accessed data within said graphical user interface;

altering one or more of said displayed TCP/IP settings using said at least one control in the graphical user interface; and

updating the at least one configuration flat file according to the altered TCP/IP settings.

Claim 31:

The [[computer-readable storage]] computer device of claim 28, further comprising the step of:

displaying help relating to configuring TCP/IP communication settings of said computer within said graphic user interface.

Claim 32:

The [[computer-readable storage]] computer device of claim 28, further comprising the steps of:

providing a selection list within said graphical user interface, said selection list including a multitude of user-selectable settings for at least one configuration parameter of said configuration file; and

updating said configuration parameter responsive to a selection within said selection list.

Claim 33:

The [[computer-readable storage]] computer device of claim 28, further comprising the step of:

synchronizing multiple ones of said at least one configuration file using said graphical user interface.

Claim 34:

The [[computer-readable storage]] computer device of claim 28, further comprising the step of:

checking a validity of at least one parameter stored within said configuration file using said graphical user interface

Claim 35:

A system for configuring Transmission Control Protocol/Internet Protocol (TCP/IP) settings, the system comprising:

a mainframe computer having only a non-graphical user interface for manually manipulating TCP/IP configuration flat files;

means for providing a graphical user interface including at least one control for configuring said TCP/IP settings, wherein said graphical user interface is configured for at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of the mainframe computer;

means for integrating the graphical user interface into the non-graphical user interface, wherein said graphical user interface is integrated with an interface component of [[an operating system]] the at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of said mainframe computer;

means for accessing data contained within at least one configuration flat file containing the TCP/IP settings for said computer;

means for altering one or more of said displayed TCP/IP settings using said at least one control in the graphical user interface; and

means for updating the at least one configuration flat file according to the altered TCP/IP settings.

Allowable Subject Matter

3. Claims 1, 5-8, 28, 31-35 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, 28 and 35, when considered as a whole, are allowable over the prior art of record. Specifically, prior art of record fail to clearly teach or fairly suggest the combination of following limitations:

Art Unit: 2179

- providing a mainframe computer having only a non-graphical user interface for manually manipulating TCP/IP configuration flat files;
- providing a graphical user interface for configuring the TCP/IP settings, the graphical user interface including at least one control, wherein said graphical user interface is configured for at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of the mainframe computer;
- integrating the graphical user interface into the non-graphical user interface, wherein said graphical user interface is integrated with an interface component of the at least one of a 32-bit multiple virtual storage operating system and a 64-bit multiple virtual storage operating system of said mainframe computer;

The dependent claims further add limitations to the allowable subject matter of the corresponding independent claims; thus are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
